

HVAC FOR HEAVY INDUSTRY

engineering procurement & construction management

... when extreme climates require extreme performances...

... when hazardous areas require extreme skills...

... when HVAC is really necessary ...

Abstract

ATP is an EPCM company focused on HVAC Systems for Heavy industry in extreme climate

The Company has been established in Rome in 2003 as engineering and consultancy.

From 2007 ATP has been awarded the firsts 2 small EPCM and since that time has focused more and more its activity on HVAC and in particular in the heavy industry and Pharma world.

With the presence in 4 countries - Italy, England, Romania and Canada - today ATP is a small international Group flexible and solid at the same time.

... made by people

ATP promises to its Client high performances and a full service in HVAC.

In order to do that ATP in the last 10 years has selected and trained the current managers that have in charge the projects success.

ATP success and performances are based on its human resources and their capabilities, skills and experience and then on the standard quality procedures.

The core Team of ATP can manage the growth of the operative teams: that is the ATP reply to the flexibility requested by the market.

No extra costs, no expensive over-structures, serious job and commitment, that is the way of work in ATP.

Activities

ENGINEERING

ATP can perform the complete engineering service from the Concept to as-built design including 3-d and Thermodynamics finite elements analysis and simulation.

The structures calculation, electricals and instrumentation systems applied to HVAC system are made by the ATP internal engineering team.

PROCUREMENT

ATP buy directly from the Equipment Manufacturers and follows the production step-by-step in order to guarantee the compliance with the technical requirements of the product

Activities

INSPECTION & TESTING

Before shipping all equipments are inspected and tested by ATP or a third party.

CONSTRUCTION MANAGEMENT

ATP provides to the erection of its Systems by means of Local Companies providing them all material needed for the construction.

In this way ATP can reduce the installation costs, maintains the control of the quality of the products and gives work to the local people avoiding any conflict with the Local Unions

Capacity

ATP can perform:

1. Turninkey HVAC systems in extreme climates
2. Procurement services
3. Engineering and consultancy services
4. Commissioning start up and training services

HVAC PACKAGED UNITS ON SKID

When the erection of a standard HVAC system is a big problem ATP provides its Packaged HVAC units, custom made according with the Client specification.

The Skid is fully engineerized and manufactured by ATP in Its workshop near Rome.

The Production capacity is 25 Skids per year with a total power capacity of 20 MW.

Each Skid unit is tested before shipping

CE, UL and CSA certifications are avilable

Execution for hazardous area and marine environment are available

HOW ATP WORKS IN NEW COUNTRIES

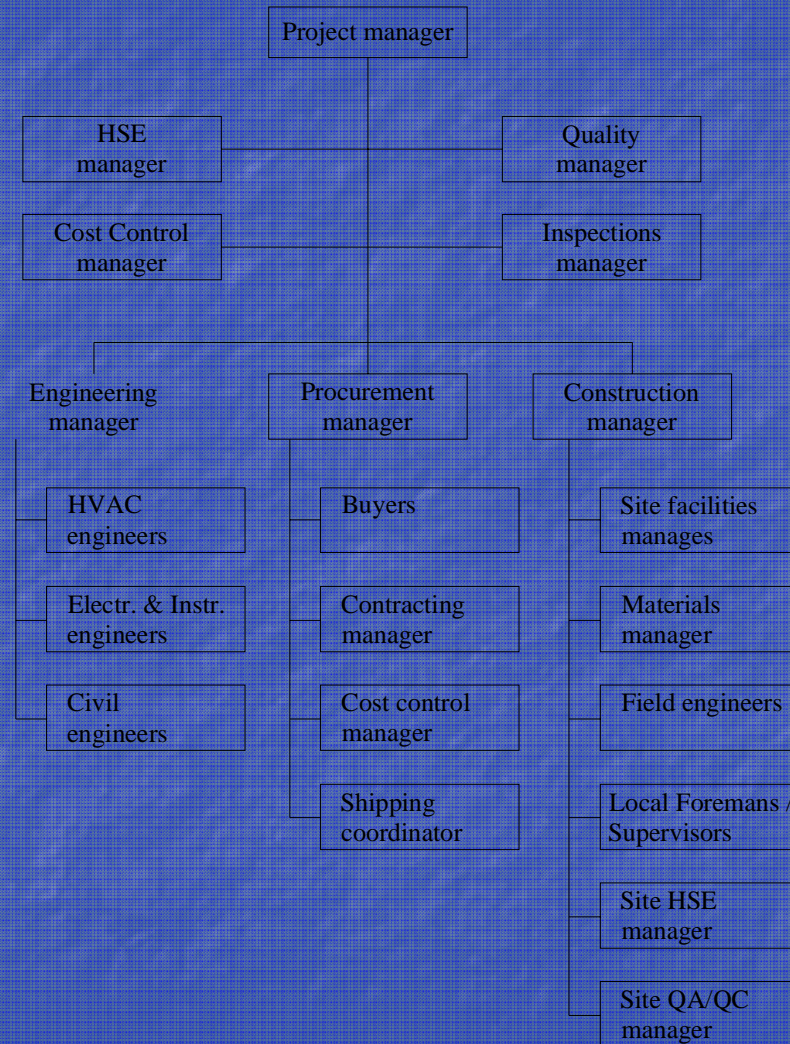

ATP has made the choice to perform HVAC systems worldwide.

In order to respect all local Laws and Codes ATP follows Its 'New Country Procedure' that consist in:

1. Country survey and local market investigations
2. Logistic investigation
3. Local Suppliers selection
4. Selection of Legal consultant
5. Selection of a local engineering company
6. Selection of local erection companies
7. Selection of local HSE manager
8. Selection of local Foreman

This procedure takes from 3 to 6 months but guarantee time saving during the execution of the projects

QUALITY & HSE POLICY

ATP is certified ISO 9001

ATP is certified with Grade A/B on ISNet World, the worldwide System that certifies the level of Quality and HSE procedure of a Company (learn more on www.isnetworld.com)
